

Security - Cookies

VERIF-AUTO takes all possible steps to ensure the confidentiality and security of data transmitted on the web. To this end, the Site uses a secure SSL (Secure Socket Layer) payment module, as well as a secure payment interface.

When the Customer consults the Site, navigation information may be recorded in a file known as a "cookie". A cookie is a small computer file. It enables the behaviour of users to be analysed when visiting a website, to optimise browsing, in particular by determining the browser used, and to identify the user when connecting, in particular in order to find out which pages have already been consulted on the Site.

Any use of cookies on the Site requires the prior and express authorisation of the Customer, which is valid for 13 months and which the Customer may modify at any time. The Customer is informed that the use of cookies leads to the collection of statistical data, but does not lead to the collection of personal data.
